The best force measurement solution by IMADA

We are an expert of force measurement.

IMADA force gauges have been used worldwide for more than 75 years to assess and ensure quality by professionals in every industry. IMADA gauges can be used for a wide range of force testing applications such as tensile, compression, peel, and more. They can even measure ambiguous things such as “cheese stickiness” and “switch pressing force.” We provide the best force measurement solutions with our know-how and a wide range of products.

The industries using our force gauges

IMADA offers the best force measurement solution.

Force changes shape and speed of objects. Force is defined as $Mass \times Acceleration = Force$. There are many types of forces such as Tension/ Compression/Shearing/ Bending, and more. Below you can see force measuring instruments called “force gauges,” which quantify the force in units of “Newton,” “Kilogram,” and “Pound.” We provide a wide range of force gauges and related equipment to fit your measuring needs.

※Please contact us for the combinations. (Our service group: +81-(0)532-33-3288)

following functions

Preventing Overload

- For reducing overload risks, a test stand stops when a force gauge senses too much force over its capacity.

If the motorized stand goes beyond the overload value during its operation, it will not continue to operate.

※Not able to prevent overload in some cases.

Making Efficient

- It automatically starts graphing and recording data.

※Graphing software is sold separately.

Automatically it starts graphing.

Force Control Functions

- Improve operating efficiency**
 - The force gauge automatically returns to starting point after reaching a pre-set force limit.
 - It can change the test speed when a force gauge senses a set point. Using this function, you can move the force gauge quickly until it touches a test sample, which reduces the time taken for measurement.

For example, slow down when a force gauge detects 0.1N.

For example, pause for 60 seconds, applying 500N pressure constantly.

- Suitable for pressure/endurance tests**
 - It can automatically regulate the load so as to be in a pre-set range for a pre-set time period, which is fit for pressure/endurance tests.

Load Cells and Amplifiers

Load cells convert sensing force to electric signal. You need an amplifier to indicate the force value measured by load cells. They are ideal for built-in or use under unique environment such as dangerous / narrow / dusty, and the like.

eZ-Connect series

eZ-Connect series are...

- eZ-Connect is composed of an amplifier and load cells. Load cells can be replaced without additional adjustment.
 - Choose a load cell from page 19 to 21 to connect with the amplifier. Available load cells have a mark
 - Its overall accuracy is calculated as the total of the accuracy of the amplifier (+/- 0.2%F.S.) and a load cell connected with it.
 - We do not offer inspection certificate when we ship it out. Therefore, please calibrate it by yourself, or request calibration for each combination if needed(available at a charge).

[This is recommended in these cases below.]

Measure things from low load to high load.

Carry out different types of tests such as tension and torque.

Keep a spare load sensor to reduce risks in operation.

Models of load cells for eZ-Connect series

● Add "e" to model name of a load cell for eZ-Connect series as stated below.

Example Normal load cell: DPU-50N

Load cell for eZ-Connect series: eDPU-50N

Sensor Interchangeable Amplifier eZT

Precise

- Capture test data precisely due to its high sampling rate (Max.2000Hz).

Easy

- No additional adjustment is needed to replace load cells.

Multifunctional

- It has many useful functions such as OK/NG judgement, saving data in USB flash drive, and more.

- Size (Amplifier only) : Approx. W75 × D34 × H188mm
- Weight (Amplifier only) : Approx. 490g

Desktop Amplifier FA Plus2 series

- Its box-shaped design is ideal for integration into facilities.
- Its rich output functions allow easy connection to external devices such as PLC.

- Size: W151 × D150 × H90mm
- Weight: Approx. 1.1kg

This amplifier is available with all load cells from page 19 to 21 except SKM-1000N and eZ-Connect load cells.
Load cells can be replaced in the most cases although they need adjustments. However, some load cells are incompatible, and they cannot be combined with an amplifier. Please contact us for the details.

Accuracy

- High speed sampling :2000Hz
It shows force value precisely and even follows rapid force change due to its high sampling rate.

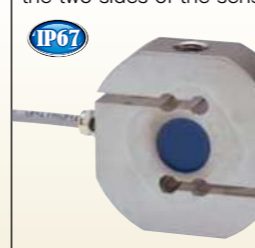

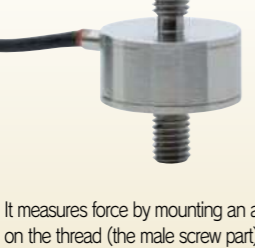

Connect with external equipment

● It can be used as a part of factory automation equipment using input and output signals.

What is IP?

IP (International Protection) is a standard which is based on IEC Standard 529 for solid foreign materials, electric devices for water and cabinet.

(Explanation of the IP code)

IP67 — Protected from immersion in water under the specified time and water pressure (depth).

● : Protection rating against solid foreign objects
 ■ : Protection rating against water

(Some IMADA load cells are rated with IP67 /65/ 64.)

IP65 — Protected against water jets from any direction.

IP64 — Protected against water splashed from any direction.

□ No ingress of dust (Refers to IEC 60529: 2001)

Only the load cell part is rated with IP. Its amplifier (indicator), connecting parts, and connector parts do not comply with IP.

Custom Order Examples

[Example: Extend the length of a cable]
 We can extend the length of a cable for gauge-PC connection or loadcell-amplifier connection.

[Example: Enhance flexibility of a cable]

Data Collection and Analysis Software

Force transition can be graphically confirmed in real time by connecting force gauge and PC via USB cable. Software allows easy data management and analysis.

Advantage of Using The Software

Transfer data from a force gauge to a PC in real time via a cable. It shows test data graphically on a PC, and force transition can be confirmed visually. Moreover, it automatically calculates the statistics and stores recorded data, enabling you to manage data with ease.

※All software is available in English and Japanese by language setting.

What is Unit "N"?

The "N" is a force unit called "Newton." $<1\text{kgf}=9.80665\text{N}>$
 In Japan, Measurement Act established in 1993 requires you to use only Newton for force measurement.
 Thus, in Japan our gauges indicate N.
 For outside of Japan, we offer international models providing N/kgf/lbf. To be specific, as for digital force gauges you can switch units (N/kgf/lbf), and as for mechanical force gauges you have to select one from the 3 units before purchase.

For your information, in Japan the unit only in the table below can be used according to Measurement Act.

Excerpt of "Measurement Units pertaining to the International System of Units" (Ministry of Economy, Trade and Industry)

Quantity of the state of physical phenomena	Measurement unit
Force	Newton
Moment of force	Newton-meter
Pressure	Pascal or Newton per square meter bar
Stress	Pascal or Newton per square meter
Viscosity	Pascal second or Newton second per square meter

Reduced value for conventional force unit $1\text{kgf}=9.80665\text{N}$

What is the best way to choose the most suitable range of a force gauge / a load cell?

⚠ Capacity in specifications means the maximum force that can be applied to a force gauge / a load cell. Force gauges or load cells would be broken if you applied force over their capacity. Therefore, we recommend that you choose the force gauge whose capacity is a little larger than expected force in your testing. Please utilize the information below to prolong gauges' lives.

Shock or Breaking Test : When Measuring Rapid Force Change

→Please choose the force gauge whose capacity is 200% of expected force in your testing.
Ex) Expected force: 10N, Measuring instrument: Digital force gauge ZTS →ZTS-20N is recommended.
 (①Double the expected force(10N) → 20N, ②Choose the ZTS whose capacity is 20N → ZTS-20N)

Elongation Test : When Measuring Slow Force Change

→Please choose the force gauge whose capacity is 150% of expected force in your testing.
Ex) Expected force: 30N, Measuring instrument: Digital force gauge ZTS series →ZTS-50N is recommended.
 (①Increase expected force(30N) by half → 45N, ②Choose the ZTS whose capacity is 45N
 → We do not offer ZTS-45N, then ZTS-50N is the nearest one.)

What Is "F.S." for Accuracy, for example +/-0.2%F.S.?

"F.S." is abbreviation of "Full Scale," and it means the capacity.
Ex) ZTS-50N offers +/-0.2%F.S. accuracy, and has 50N capacity.
 →The error is... $50\text{N} \times \pm 0.2\% = \pm 0.1\text{N}$.
 →When the measured value is 30N using ZTS-50N,
 guaranteed result is... $30\text{N} \pm 0.1\text{N} = 29.9 \text{ to } 30.1\text{N}$.

Key Point of Maintenance of Measuring Instrument

Measuring instruments should be calibrated periodically. Calibrating means checking if they maintain initial accuracy or not. All of the measuring instruments including force gauges reduce their accuracy slightly day by day, therefore, they should be calibrated, and adjusted as required to conduct precise measurement continuously.

IMADA offers calibration services, so you can keep using our force gauges for long after purchase at ease. Besides, our calibration center is certified with ISO/IEC 17025:2017, therefore, we offer high quality of calibration service if required.
 ※Some products cannot be calibrated for some reasons.

Test Stands

Test Stands Improve Repeatability.

They provide constant test speed and apply load straight, reducing the variation from a person to a person.

A force gauge can be used by hand, and also it can be used with a test stand for greater accuracy. Combine a test stand with a force gauge and attachments to create a force testing machine, which offers a significant advantage over handheld use in precision.

Motorized Test Stands

They provide constant test speed and apply force straight, offering high repeatability.

On our website, you can see a wide range of force testing applications, and download a specification sheet of each product. Please feel free to contact us.

Common overview of Motorized Test Stand (Compatible Test Stand : MX2 series, MH2 series, EMX series)

Adjusting Speed ※1

Testing speed is easily adjustable with the dial.

Setting Resolution:

Speed Range	UNIT
10-20mm/min	0.5mm/min
20-100mm/min	5mm/min
100-300mm/min	10mm/min

※Adjustable speed types: Start/Measuring/Return

Three Measuring Modes

Three Testing Modes are available:

- MANUAL MODE:** It moves a force gauge at the set speed while Up/Down or Left/Right button pressed.
- JOG MOVE:** It moves a force gauge at light feeds (approx. 0.05mm/1 turn) by turning the dial.
- CYCLE MODE:** It reciprocate a force gauge between stroke-limit knobs.

Other Functions

In CYCLEMODE, you can set the reciprocating frequency and pausing time.
Counter (the reciprocating frequency):Max. 65535 times
Timer (pausing time):Max. 99 min 59 sec 9 (by 0.1 sec)

Versatile Functions with Force Gauge

Versatile functions are available with the Force Gauge (ZT Series) and the CB series cables.

- Overload Prevention:** A test stand stops when a force gauge senses too much force over its capacity.
- Force Control:** A test stand stops when a force gauge senses a pre-set force limit. Or it can automatically regulate the load so as to be in a pre-set range for a pre-set time period.
- Measurement Speed Control:** Auto-switch function between the Moving direction and the Measurement Speed.
- Auto-Functions:** Auto-Zero Reset of the Force Gauge and Auto-recording of the measured values reflected in the Software during the measurement.

Examples of Customized Test Stands

We provide made-to-order test stands to fit your needs.

Changing Test Speed Range / Extending Column Length

[This is recommended when you...]

- Test stretch samples.
- Compress (Tensile) long.
- ↑ We can extend column length of both horizontal and vertical test stands.
- Test speedily.
- Test slowly.
- ↑ We can change the range of measuring speed.

Testing Large Samples

[This is recommended when you...]

- Measure a large sample since the test stand can be moved in the X-Y direction with the guide rail.
- It improves the measurement efficiency since a sample is not needed to move even when compressing (pulling) multiple points from one end to the other of wide surface.

The electromagnetic lock cover provides safety

[This is recommended when you...]

- Would like to stop the test stand completely before the door is unlocked, instead of unlocking the door at the same time as the stand stops.

Separating a Display Part from a Drive Part for Built-in

[This is recommended when you...]

- Incorporate IMADA force testing system into your equipment
- Fix a display part (a drive part) on a specific place
- Manipulate it apart, preventing dangers in testing.

Attachments

The fixtures mounting on a force gauge thread or a test stand table

Attachments are integral components of testing systems, designed for a wide variety of force testing applications for tension, compression, peeling, COF, and more.

The Attachment Types and How to Use

IMADA attachments are separated to 2 types generally.

1 Attachments to be mounted on a force gauge.

A force gauge's thread is M6 or M10 screw, and type 1 attachments are designed to fit into either screw. You can choose desired one from a wide range of attachments, and mount it on a force gauge's thread to complete a force tester.

2 Attachments to be mounted on a test stand table.

Type 1 can be mounted on a test stand with a grip mounting adapter.※

※It is attached with test stands (except some models).

- ⚠ Weight of an attachment is applied as force to a force gauge, therefore, please choose an attachment whose weight is 10% or less of the force gauge's capacity.
- ⚠ Please contact us before purchase to choose the most appropriate attachment for your testing. Some samples cannot be tested appropriately due to their shapes or materials. We are pleased to help you choose the best attachment to meet your testing needs.
- ⚠ Some attachments are in accordance with Japanese Industrial Standard(JIS). A force gauge and a test stand are required for measurements complying with JIS. Please feel free to contact us for the details. When you need other standard such as ISO or ASTM, please contact us as well.

FSA series Force-Displacement Analysis Unit

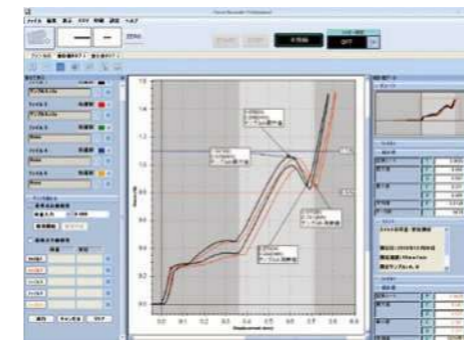

High-performance measurement unit that can easily analyze the relationship between force and displacement

With this unit, deformation amount (displacement) to compression (tension) force can be measured.

It is ideal for tactile test and material characteristic evaluation.

It draws Force vs Displacement graphs in real time at Max.2000Hz

Basic Functions of Force-Displacement Measurements

- Easy connection to PC by USB
- Smooth graphing performance at 2000Hz
- Graph zooming function
- Comment insertion on graphs
- Quick data export to WORD, EXCEL, PDF

Useful Functions for Measurements and Analysis

- Graph comparing function Max 5 graphs.
- Reference line function
- Statistical calculation (maximum/ minimum/ average values).
- Automatic displacement reset at the measurement start (when the force reaches the set force value)
- Test trigger function (when the force reaches the set displacement value)

The Advantage of Measuring Displacement and Force Together.

Since force transition with reference to displacement can be confirmed, this unit is perfect for tactile testing, material characteristic evaluation, and more.

Example of A Switch Characteristic Evaluation

Curves in force-time graphs constantly goes from left to right, and never come back to left. On the other hand, curves in force-displacement graphs come back to left since it is drawn based on displacement. Therefore, force-displacement analysis method is better choice to identify the hysteresis(zero reversion). Moreover, the point of switch ON/OFF can be automatically defined and displayed by using Mark On function.

※Custom-made cable is required for Mark-On function.

Example of Plastic Bending Test

Measuring displacement means identification of deformation amount. It is easy to check "How much force does it need to transform a testing sample(dent a sample at ○○mm)?"

Other Test Examples

- Simple evaluation of spring characteristic
- Simple evaluation of rubber product characteristic
- Cushioning material repulsion test
- Car cushion hardness test
- Fitting quality test of cosmetic containers
- Extract test of connectors
- Peel test with distance of tape and films
- Compression and Breaking test for electric components
- Pulling test for slide structures.
- Repulsion test for sport equipment (Tennis ball)
- Food texture test
- LCD panel strength test

Configuration

A Force Gauge

It measures force, and indicates force and displacement values. Different attachments can be combined to handle a wide range of force testing applications. Easily put it on (off from) a test stand by screws.

A Test Stand

It is a machinery to move a force gauge up and down (left and right). Move it with up/down (left/right) buttons. Easily set up test requirement such as test speeds, pause and more with its dial.

A Cable

It connects the force gauge and the test stand for control. (FSA-MSL does not include this cable since it operates manually.)

Standard Attachments

Attachments are integral components of this testing system. Although this testing system comes with some basic attachments, optional attachments can be combined as required. We offer a wide range of optional attachments to fit various measurement needs.

Software

This software can draw force-displacement graph. It captures force and displacement values at Max. 2000/sec, and draw them into graphs smoothly. It automatically starts graphing using Trigger function. ※MSL-FSA does not have this Trigger function.

Accessories	Instruction manual, Inspection certificate, Power cable, 2 pcs of spare fuses, Driver CD-ROM(including software for data log "ZT-Logger"), Graphing software "Force-Recorder Professional".	

Note: ①A force gauge is separately sold. ②Actual measuring capacity depends on the force gauge's capacity. However, when the test stand's capacity is less than the force gauge's capacity, you can measure force up to the test stand's capacity. (※1)The maximum height or length means the distance between the test stand table and the thread of the force gauge ZT series general type(1000N or less)at the highest position of the test stand. The distance does not include attachments. The distance of FSA-2.5K2' FSA-5K2,FSA-2.5HK2 is in case of mounting ZT series high capacity type. ※The unit is different from Japanese domestic models.
