## Daily Check and Calibration of Torque Screwdrivers

### Digital Torque Gauges for Daily Inspections

One use of ATGE-G and BTGE-G digital torque gauges is to check the accuracy of small torque screwdrivers such as AMLD/AMRD and BMLD/BMRD. Monitoring drivers with daily inspections confirms driver function and accuracy prior to use. Refer to page 59 and 60.

[Preset Tightening Mode](#), [Judgment Tightening Mode](#), [Peak/Run Modes](#)

\* Retightening/loosening torque is performed in the Peak Mode.

**Preset Tightening Mode:** Allows user to set the target torque with specific % of torque allowable beyond target, then the red LED moves towards the right to indicate the level of the applied torque. When it reaches the target torque range, the blue LED blinks and the buzzer signals tightening completion.

**Judgment Tightening Mode:** Allows user to set judgment ranges for lower/upper limit in the tightening operation. Upon tightening completion a judgment is made as torque value is stored in the memory.

## CTA2-G Features 2 Tightening Modes: Single Spindle and Production Tightening Modes

**1. Single Spindle Tightening Mode:** For angle method tightening of a single bolt tightening with snug torque, tightening angle and tightening angle upper limit settings.

**2. Production Tightening Mode:** For angle method tightening of multi spindle, with tightening torque, snug torque, 1st, 2nd and 3rd tightening angle, each upper limited angle, the numbers of spindles are registered.

By using the included software package, various settings can be done through the PC and transferred to the wrench with the final tightening values being sent back to an Excel spreadsheet.

### Setting example

Connect 2 LS torque wrenches directly and 2 Wireless torque wrench through R-CM receiver with M-FH module.

Work No.2 is required to tighten 2 different portions, one has hexagon bolts 4pcs and the other has cap screw 3pcs

No.	Setting	WRENCH No.1	WRENCH No.2	WRENCH No.3	WRENCH No.4
2	Tightening count	4	0	3	0

Set the number of bolts (0-99pcs) the work needs for each torque wrench. Set 0 when no torque wrench is needed.

## Example of Various Timer Functions

**Automatic Judgment Timer (1-300 sec. 1 sec. interval)**  
Starts after START input or input of first count signal, and judges OK/NG as the timer reaches set time

[Timing chart]

Tightening number 3pcs, Judgment mode JG3, Automatic judgment timer 6sec.

**Interval Timer (0-99 sec. 1 sec. interval)**

If the operator does not go on to the next bolt within the interval timer (0-99 sec. 1 sec. interval), the alarm goes off to warn the operator.

[Timing chart]

Tightening number 4pcs, Interval timer 5 sec.

**Double count prevention (0.1-10 sec. 0.1 sec. interval)**  
Prevents counting an accidental double click

[Timing chart]

Tightening number 3pcs, set on 0.5 sec. and operates torque wrench several times within 0.5 sec.

**Easy setting with CNA-4mk3 setting software**

Setting software gives instruction for each setting parameter.

- Note
1. Consult to Tohnichi or distributor for any other types of torque wrench.
  2. FHW transmitter has both R-FH, previous FH256MC mode and M-FH, advanced mode for R-CM+M-FH.
  3. With identification mark on the transmitter body version can be set the new mode and previous mode by key operation. Without identification mark version can be changed the mode by SB-FH2 setting box.

## Two Steps Click of double tightening detection

FHW mechanically detects rotated angle from A point to B using limit switches and a gyro sensor inside the transmitter, it can detect double tightening without error.

- 1st click: Light click feeling, it starts angle detection --- a
- 2nd click: Strong click when reaches set torque --- b

The transmitter can send 3-digits of double tightening detection signal to the R-CM. By receiving the signal via RS232C, the external device can monitor whether double tightening has occurred. Setting software is available for angle setting and double tightening signal ON/OFF. Note: Angle setting can be conducted by the FHW itself and the tightening application.

## Advanced Wireless Pokayoke Communication

FHW has advanced wireless communication with R-CM receiver and the M-FH module. In M-FH mode, the diversity antenna and wraparound radio wave are effective in avoiding obstructions and achieves a high level of reliable communications.

## Radio Frequency Torque Wrench System

R-FMA

T-FMA

- 900 MHz frequency wireless error-proofing torque system
- For facilities that restrict the use of 2.4GHz
- Transmission Distance 10-20 Meters/30-60 Feet
- Easily change frequency with wireless setting box, SB-FMA
- Available on a wide variety of click type torque wrenches.

### Transmitter, Receiver, and Setting Box

Model	Description	Specifications
T-FMA	Transmitter for R-FMA	900MHz (902.5 - 927.5MHz) 250kHz interval, 80CH, approx. 10 - 20m / 30 - 60 feet operating distance
R-FMA	Receiver for T-FMA	
SB-FMA	Setting box	

- Note
1. Radio frequency communication errors may be caused by noise or a shield placed between the transmitter and receiver. In addition, radio waves reflected by metal, concrete, etc. may interfere with radio waves directly sent to the antenna of the receiver and dead point occurs, resulting in communications errors.
  2. Available only in the United States and Canada.
  3. CSPFMA, QSPFMA model series are most popular.

**Use 2 FD/FDD wrenches by One Receiver**

**Preset 2 points of Upper & Lower limit**

R-CM controls up to two units of wrench and gives OK/Hi-NG/Lo-NG judgment for applied torque value from wrench No.1 and No.2. Receiver conducts judgment and sends answer back signal to the wrench with the result.

**Use Multiple FD/FDD wrenches by One Receiver**

**Control each Upper & Lower limit by PC/PLC**

An external device gives OK/Hi-NG/Lo-NG judgment for applied torque value from each wrench. R-CM receives the result from PC/PLC and sends answer back to each wrench.

Note: Multiple wrenches can connect to one receiver as long as they do not signal at the exact same time.

## FDD-AD Torque & Angle Data Transfer

By detecting final angle at the completion of the tightening operation, it is possible to eliminate tightening errors caused by provisional tightening, the tightening application or double tightening.

The receiver's set value can be changed by command input from PC / tablet depending on each tightening operation.

TDMS shows the correct sequence of each operation process, including the upper and lower torque value for each fastener, then operator simply follows the instruction sequences shown on the screen. The collected data is linked to each fastener automatically eliminating the need to manually transcribe the information and prevents human error. In tightening T-Mode with CEM3-G-BTD, the software wirelessly transmits correct upper and lower limit according to each torque specification, so tightening management for various torque values is easy to control.

## Advantages of the New Retightening Method: T-point Method

- Anyone can measure the tightening torque easily.
- Requires less time to perform the measurement.
- Dispersion of data is small (Figure-3).
- No individual interpretation or performance variable is involved in measuring the torque (Figure-3).
- Internal software converts measured torque to initial tightening torque value (Figure-3).

Figure-1 Traditional retightening torque method

## Retightening Torque Method

Retightening torque method aims to measure the torque at which a tightened bolt start to rotate again as further torque is applied. The retightening measured values are classified as one of these three kinds:

- The torque which overcome the static friction of the bolt (A point).
- The torque at which the bolt starts on turn continuously (B point).
- The maximum torque at this inspection (C point).

## Proposal of T-point method (Figure-2)

Retightening torque first starts with the rotation of the head only, then the screw starts to rotate. Shifting from static friction to dynamic friction, the friction whip settles and the torque starts to increase at the steady pace again. T-point method figures TT as retightening torque value.

**The Relationship between Interchangeable Heads and Torque Wrenches**

Tohnichi's interchangeable head wrenches have specific diameter round ends that fit into corresponding head base openings. Head and wrench model names include the diameter sizes so heads can be matched to wrenches that will accept those heads.

For example: SH15D×17 will fit on CL100N×15D

A variety of different head types (SH, RH, QH, RQH, FH, DH, AH and SH-N) can be used on one wrench or different types of wrenches such as CL (for tightening) and CEM3-G (for inspection) can use the same head that has the corresponding diameter size.

**RH Ring Head**

RoHS

The RH type ring heads guarantee the safe work as the axes of bolt and RH ring head are always aligned and prevent the heads will drop.

Note: RH8D×5.5 to RH8D×7 are single hex shape.

Fcon

Model
Fcon

Sales Unit: 10pcs/case  
Content: 90g/bottle

**How to apply Fcon on the bolt** (in case of M10 bolt)  
Follow the illustration below. Apply some along the screw thread (2 mm width more or less), and on the bearing surface at 3 different spots evenly. Use appropriate amount depending on the size of the bolt.

\* Apply Fcon on part indicated in color.

## Axial Tension Stability Characteristics

**Characteristic of axial tension stabilization**  
Torque coefficient calculated by formula  $K = t/(d \times f)$   
T = tightening torque, d = nominal size of screw, F = axial tension  
Torque fluctuating coefficient = torque coefficient standard deviation/average torque coefficient

# Tohnichi ISO6789:2017 compliance status

## ■ About ISO6789:2017 standard

To meet needs of manufacturers and calibration services, currently, the 2017 version of ISO6789 has been published, and its operation has started in Europe.

## ■ Main points of Changes

- The standard has been divided into two parts.
  - Part 1: defines design and manufacturing requirements, including the content of the Declaration of Conformity.
  - Part 2: sets out requirements, including how to calculate uncertainty for traceable calibration certificates.
- The contents and terms of the calibration certificate will change.
- The allowable range of posture during calibration has been changed. In addition, the calibration conditions have changed.
- The content related to resolution has been added.
- There are restrictions on the measurement error, measurement method, and environment of the measuring instrument used for calibration.

## ■ Tohnichi Actions

This ISO 6789-2017 standard applies from Tohnichi torque wrenches. Not applicable for some models, such as F series and small torque range wrenches. Tohnichi torque screwdriver series and digital torque wrench series will continue to apply the current ISO 6789-2003. Torque gauges and torque meters are not subject to ISO6789. Some Tohnichi dial indicating torque wrenches change their torque range according to the ISO6789-2017 standard requirements. Calibration certificate of the new standard is attached from the applicable model produced after January 2022.

- Some of DB, DBE, DB-S, DBE-S, CDB-S and T-S models in Nm and Metric units will be changed the minimum torque range in accordance with meeting the requirement of less than 5% of the resolution.

e.g.

Previous model		New model
DB6N4		DB6N5
Torque range: 0.6-6Nm	⇒	Torque range: 0.7-6Nm
Graduation : 0.1Nm		Graduation : 0.1Nm
Accuracy : +/-3%		Accuracy : +/-3%

- Requirement of ISO 6789:2017 specifies the resolution 1/5 of increment width\*

\* In the case the pointer tip width should be less than 1/5 of the scale or dial increment.

- Reading Accuracy should be 0.02Nm in ISO6789-2017 ( $0.1\text{Nm} \times 1/5 = 0.02\text{Nm}$ ).

- 3% of the minimum torque 0.6Nm is 0.018Nm (Shortage of resolution).

- Change the minimum torque to 0.7Nm for the update model DB6N5 (3% of the minimum torque 0.7Nm, 0.021Nm is available with the resolution 0.02Nm).

# Torque Settings for Torque Screwdrivers

## ■ LTD, RTD, MLD

### Method of setting torque, Adjustable type:

1. Turn the locker of the main unit clockwise to release the lock.
2. Holding the main scale knurling part with the fingers of your right hand, turn the grip with the fingers of your left hand to set the torque value.

### \* Setting the torque set values:

- (1) Turn the grip to match the top end of the supplemental graduation with the main scale.
- (2) Match the supplemental graduation line with the main scale vertical line (See the figure below).
3. After setting the torque, turn the main unit locker counterclockwise to lock it.

## ■ NTD, RNTD

### Method of setting torque, Preset type:

1. Holding the grip with your left hand, insert the adjusting tool bar into the grooves of the adjustment screw and turn to adjust. Turn clockwise to increase the torque value.
2. Insert with the exclusive bit into the loading device of the Torque Driver Tester (TDT) and fix it.
3. Turn the loading device clockwise to measure the torque value.
4. Continue to repeat procedures 1-3 until the torque is matched.

## ■ FTD50-400CN

### Method of preloading the FTD

The preload function is a function that uses the handle to apply a preloading torque close to that of the measuring point to minimize the twisting angle during measurement.

In the FTD series torque screwdrivers, a preload function is provided to prevent your wrist from becoming strained and the torque scale from becoming difficult to read when operating close to the maximum torque.

1. Holding the FTD screwdriver with your left hand, turn the preload handle in the counterclockwise direction using the fingers of your right hand (in case of clockwise measuring).
2. After some slipping turns, the needle will begin to move, and it will be easy to set an optional torque value.
3. If you do not wish to use the preload function, turn the preload handle until there is no tension and the central set indicator (red mark) points to the FREE mark.

## ■ FTD-S

### Method of setting the FTD-S indicator and memory pointer

1. Make sure the indicator is pointing to zero by matching the scale. If not, adjust to zero by lightly pushing down on the scale and rotating it.
2. Turn the memory pointer in the direction opposite to the measuring direction until it matches the main indicator.
3. Carry out torque measurement or torque tightening.

# Torque Settings for Torque Wrenches

## ■ Adjustable type

### ● QL, QL5/CL, CL5

1. Turn the adjuster and match up the ▲mark of the adjuster and ▼mark of grip-end cap.
2. Pull the adjuster.
3. Pull the adjuster and turn it to set a torque.

### ● QL, CL, YCL, A, etc.

1. Release the locker and turn it counterclockwise.
2. Set the torque by turning the supplemental graduation, confirming the value of the main scale.
3. Turn the locker clockwise to lock it. Change the locker pin location if the pin is contacted when locking.

### ● QLE2, CLE2, DQLE2, and PHLE2

1. Press the push button
2. Remove the extension handle
3. Turning the adjusting handle clockwise to increase the set torque and counterclockwise to reduce it.

## ■ Pre-lock and preset types

### ● PQL, PCL, MPCL, AC3, QSP3, etc.

1. Insert the provided hexagon key into the adjusting hexagonal hole.
2. Turn the hexagon key to set the torque, confirming the value on the main scale and supplemental graduation.
3. No locking mechanism is needed for PQL models (An adjusting tool for QSP3 is optional).

Model	Adjusting hexagon hole mm size across flats
PQL10N-PQL25N	2.5
PQL50N-200N4	4
AC25N3-100N3	

## ■ Dial Indication types

### ● DB, CDB, T

1. For measurement  
The scale on the dial gauge can be rotated. Press the dial case from above and turn the pointer to correctly match "0".
2. Presetting exclusively for tightening  
Alternatively, the desired torque can be preset on the dial beforehand and then the bolt can be tightened until the pointer shows "0".

## ■ Screws and Applicable "T" Series

	Standard T series	0.5T series	1.8T series	2.4T series
Applicable screws (Strengths) (Material)	4.6-6.8 SS, SC, SUS	- Brass, Copper, Aluminum	8.8-12.9 SCr, SNC, SCM	10.9-12.9 SCr, SNC, SCM, SNCM
Axial tension standard value [N/mm <sup>2</sup> ] Min - Max	210 300-160	105 150-80	380 540-290	500 710-380
Application	To be applied to ordinary screws, unless otherwise specified	Male and female screws with copper, aluminum or plastic, for die-cast plastic products	Durable screw joints made of special steel including those affected by additional dynamic loads (Friction clamping)	
Applicable products	Ordinary products	Electronic products	Vehicles, Engines	Construction products

\* The maximum to the minimum of the axial stress is considered as the dispersion of the torque coefficient.  
 Example: max = 210 × (0.2/0.14) = 300 [N/mm<sup>2</sup>]  
 Torque coefficient: 0.14/Min. - 0.2/Avg. - 0.26/Max.

## ■ Calibration Certificate ■

- Torque wrenches are measuring instruments. The calibration certificate is the document which certifies the accuracy of the torque products, which are traceable to Japanese national standards. Please keep the calibration certificate for future use.
- Accuracy % is calculated on each indicated value. Accuracy stated as “+/- a percentage + 1 digit” indicates that digital display will round up to next digit in resolution if value falls between digits.
- Tohnichi’s torque products provided with a calibration certificate can be used immediately at ISO9000 facilities without the need for further acceptance inspection or any additional certifications.
- The calibration certificate is effective for 1 year from the date of first use within 3 years from the date of inspection. Please fill in the date in the calibration certificate when first used.
- Tohnichi’s manual torque tools are normally guaranteed to 100,000 tightening cycles or 1 year. For click type torque wrenches, it can be also used up to 1,000,000 tightening cycles if the function is properly maintained and adjusted at every 100,000 cycles.

## ■ RoHS/Restriction of Hazardous Substances Directive ■

Following RoHS, which restricts the use of certain hazardous materials in product manufacturing, Tohnichi has expanded its efforts in environmentally friendly procurement. Starting with our Product Catalog 2011 edition, the **RoHS** mark is shown on all applicable models conforming to the RoHS directive. For details, please contact Tohnichi.
